

ROHAN GUTAL

Baramati, Pune, India • +91 9834692648 • rohangutal2001@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Passionate and driven Data Science & Machine Learning fresher with hands-on experience in Python, SQL, and end-to-end ML pipelines. Proficient in Exploratory Data Analysis (EDA), feature engineering, predictive modeling, and interactive data visualization using industry-standard tools. Demonstrated ability to build and deploy real-world ML applications with measurable outcomes. Seeking a fresher-level role in Data Analytics, Data Science, or Machine Learning Engineering to leverage strong analytical thinking and problem-solving skills.

TECHNICAL SKILLS

Languages & Databases: Python, SQL, HTML, CSS, MySQL, MongoDB (Basics)

Python Libraries: Pandas, NumPy, Scikit-learn, TensorFlow, OpenCV, NLP

Data Visualization: Matplotlib, Seaborn, Plotly, Power BI, Tableau

Tools & Platforms: Jupyter Notebook, Google Colab, Git/GitHub, VS Code, MS Excel

Core Competencies: EDA, Feature Engineering, NLP (Basics), Sentiment Analysis, Model Deployment

PROFESSIONAL EXPERIENCE

AI/ML Intern | 1Stop.ai

Feb 2025 – May 2025 | Remote

- Built and evaluated a Decision Tree Classifier on a bank marketing dataset to predict customer subscription likelihood, achieving ~85% accuracy; applied hyperparameter tuning to reduce overfitting.
- Performed Sentiment Analysis on a Twitter dataset using NLP preprocessing (tokenization, stopword removal, TF-IDF), classifying tweet polarity with Logistic Regression; analyzed brand perception trends across 5,000+ tweets.
- Collaborated in AI workflow pipelines — from raw data ingestion and feature selection to model training and actionable business insight generation on real-world datasets.

PROJECTS

Multi-Disease Prediction System | Python, Scikit-learn, Streamlit, Pandas, NumPy

- Built end-to-end clinical decision-support web application predicting Heart Disease, Diabetes, and Parkinson's Disease using ensemble ML and deep learning models (Random Forest + ANN) trained on real medical datasets.
- Deployed TF-IDF + Cosine Similarity NLP chatbot for answering health queries from a knowledge base, with dynamic KB updates at runtime.
- Built a full-stack Flask REST API with 5+ endpoints, session-secured admin dashboard, SQLite patient record storage, and downloadable HTML health reports.

Customer Sentiment Impact on Sales & Profitability in E-Commerce | Python, SQL, NLP, Power BI

- Analyzed 10,000+ customer reviews from an e-commerce dataset to quantify the correlation between product sentiment scores and sales volume/profit margins.
- Applied NLP preprocessing (VADER, TextBlob) for sentiment scoring; segmented products into positive, neutral, and negative sentiment tiers and mapped trends against revenue data.
- Identified that products with predominantly positive sentiment yielded ~22% higher average profit margins; delivered insights via an interactive Power BI dashboard for business stakeholders.

Media Control System via Hand Gesture Recognition | Python, OpenCV, MediaPipe,

- Designed a real-time computer vision system to control media playback — play/pause, volume, and track navigation — using hand gesture recognition, eliminating the need for physical input devices.
- Leveraged MediaPipe Hands for landmark detection and OpenCV for frame processing; mapped 6 distinct gestures to system-level media commands with ~92% gesture classification accuracy.

EDUCATION

Bachelor of Engineering — Computer Engineering

2022 – Present

SVPM's College of Engineering, Malegaon(BK), Baramati | CGPA: 8.05/10

HSC (12th Grade) — Creative International School & Jr. College | 93.50%

SSC (10th Grade) — Vidhya Pratishthan's New English Medium School, Baramati | 91.80%

CERTIFICATIONS

- DeepLearning.AI — Data Analytics Professional Certificate
- 1Stop.ai — Project Completion Certificate | AI/ML Internship (2025)

SOFT SKILLS

Analytical Thinking • Data Storytelling • Problem-Solving • Collaboration & Teamwork • Adaptability • Continuous Learning
